

# Starfish™ Liner Lock

## Lock in the Savings!

The Starfish Liner Lock improves product safety and productivity for top discharge of fluids in food, health and beauty, chemical and industrial processing applications.

Currently, operators use a tube or other device to insert into fitments on bags when discharging product. These configurations are often loose fitting, making it possible for contaminants to enter the product and often result in product spillage, creating a safety hazard in the work-place.

In contrast, the Starfish Liner Lock mechanically bonds the pumping system to the liner, creating a tight seal that keeps out contaminants. The secure fitment also keeps the pumping system stable, and reduces the possibility of hoses flapping around and resulting in spills and waste.

This highly-designed accessory delivers big results. It increases product protection, and provides improved operator performance and efficiencies. Setup of the pumping system within the Arena bag-in-box system is much easier and cleaner using the new Starfish Liner Lock. The Starfish Liner Lock is adaptable to any type of pump that can be inserted into a 2" or 3" top fitment.

It is designed to work in conjunction with the Arena Air-Evac® Starfish liner and bag-in-box packaging system. The Starfish Liner Lock, which is constructed of FDA approved material, is easily cleaned for reuse.
