

The Arena Bag Wringer

Wring out more savings!

Combining Arena's Bag Wringer along with the Arena 330 Shipper™ System will minimize product trapped in your bags, using its patented nose and winch technology.

- The heavy-duty aluminum Arena Bag Wringer easily mounts on the walls of The Arena 330 Shipper™
- When ready for discharge, an operator locates the orange dot and pulls the bag through both D-Rings(see figure A). Then simply fold the bag over and through one D-Ring(figure B). This harnesses the bag and the Wringer is now ready to use
- With viscous products, this mechanism greatly reduces the amount of residual that typically remains in the bag after discharge
- The Arena Bag Wringer is another product that maximizes your container investment and minimizes your residual waste
