

Tamper Evident Strip

With the ever-increasing concern of being able to identify incidents of tampering with materials while being stored or transported, Arena Products is offering a viable solution to this problem.

Polyester tamper evident strips, applied directly to top the fitment (and bottom fitment if applicable) of the Arena bag liner at the completion of the fill process, is a cost effective and user friendly way of applying tamper evident features to the bulk product.

The tamper evident strips come in 1" by 6" pre-cut lengths for easy application in a manufacturing or warehouse environment. At the completion of the fill process, simply replace the bung cap, remove the backing film from the tamper evident strip and apply the strip across the fitment and cap and down the sides of the fitment.

Evidence of tampering or access to the product is identified by inspecting the strip and verifying that it has not been previously removed. Whenever the strip is removed, the red adhesive will separate from the transparent polyester. Any attempt to re-apply a removed strip will be visually apparent.

For more information on this line of bags, please contact your Arena sales representative.
