Tamper Evident Solutions – Bottom Discharge Port

As an additional solution to discourage or show evidence of tampering, wire ties or cable-locks may be installed by drilling small holes in the Shipper base webbing (as illustrated below) and threading the ties through the bottom discharge port, thereby creating a barrier over the bottom fitment of the bag liner. This barrier will prevent the bung cap from being removed from the bottom discharge fitment.

Various ties and cables can be
Acquired through:

**American Casting &
Manufacturing Co.**

1-800-342-0333

<http://www.americancasting.com>

Ties and cables are available in assorted lengths and configurations according to customer preference. The ideal length of the ties is 15 inches to accomplish the applications shown above. Hole diameter should be large enough only to accommodate the preferred tie or cable but should not exceed ¼ inch.

Stamped and numbered ties and cables are available if tracking shipped batches is desired.
