

## WALL MOUNTED AIR EVAC REGULATOR

For those customers who prefer to mount the Air Evac Regulator in a fixed position on a wall or cabinet, in close proximity to their pack line fill station, Arena Products has developed this option.

To take advantage of this configuration, customers would purchase the wall mounted model (AP3403.5), which includes the regulator and associated parts, such as a mounting bracket, a light duty spiral vacuum hose (8' long) and fittings.

The advantages of this model are:

1. It eliminates the possibility of dropping the regulator on the floor and possibly damaging it.
2. The high input pressure air line could be positioned off the floor and out of the way of fork trucks and operators, leaving only a light duty vacuum hose being hung on a wall of the tote.
